

Mobile Companion™

Technology for Everyone

Mobile Companion extends the benefits of license plate recognition (LPR) and facial recognition technology to the entire agency - in one easy to use app. Scan license plates, run LPR analytics, receive alerts from your LPR network, and more. Use the facial recognition features of Mobile Companion to verify identities in the field, retrieve stored images, and more.

Key Features

- ✓ Scan license plates, conduct queries, and receive LPR alerts on your mobile device
- ✓ Take photos for real-time identity validation in the field
- ✓ Mobile Hit Hunter feature matches agency hot-lists to Vigilant private LPR data to locate "hits" near your location
- ✓ Complete audit trail of every transaction
- ✓ Ideal for foot patrol, crime scene canvassing, and special events

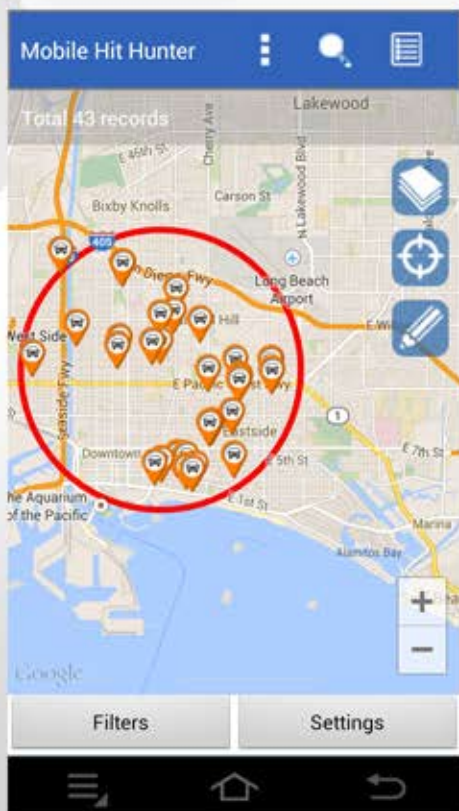

Protecting Officers,
Families and Communities

Mobile Companion

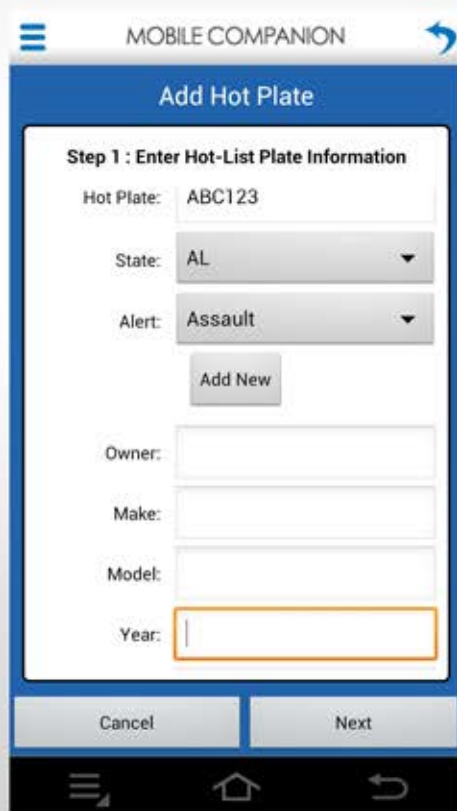

Mobile Companion's interface is incredibly intuitive, and is synchronized with the user permission matrix and auditing requirements set by the Agency Manager.

Plate capture is simple. Position the license plate inside the box and hit Capture. This app is perfect for special events such as motorcycle rallies and other environments where traditional LPR is not an option.

Mobile Hit Hunter matches live data from the Vigilant national LPR data network against agency hotlists to locate hits in your area and enhance situational awareness

Add Hot Plate allows for officers in the field, with proper agency permissions, to easily add plates of interest to the LPR network

Facial recognition lets probe images, taken by the officer, or uploaded from a file, be matched against a gallery of known subjects
